

CB-75 and CB-85

School-Wide Intercom Modules

CB-75

Key Features

- Easy two-way intercom communication
- Push-to-talk microphone
- Integrated speaker
- Single-gang enclosure
- Easy install RJ-45 connection
- Remotely powered

CB-85

Key Features

- Hands-free talk back microphone
- Low-profile, ceiling mount
- Easy install RJ-45 connection
- Single-gang enclosure
- Remotely powered

Calypso's Conductor Integrated School Communications solution provides integrated classroom and administrative audio systems over an IP network, which drives operational efficiencies and boosts functionality. As a part of Calypso's Integrated School Communication Solution, the CB-75 and CB-85 intercom modules allow for communication with the administration office to happen from almost anywhere on campus.

CB-75 School-Wide Intercom

With a push-to-talk microphone and integrated speaker, you can quickly initiate or receive school communications to the administration office from anywhere a CB-75 intercom is installed. It fits in a standard single-gang enclosure which makes it easy to add to hallways, gymnasiums or auditoriums for emergency communications where phones are not always available. The CB-75 can also be used in outdoor areas with the addition of a standard weather proof enclosure case.

CB-75

CB-85 Classroom Talk-Back Microphone

The CB-85 is a ceiling mounted, hands-free, talk back microphone that allows a teacher to answer an intercom call from anywhere in the classroom. Mounted in the ceiling tile with a single-gang enclosure, the CB-85 has a subtle, low-profile appearance. When an intercom call arrives, audio volume from classroom sources will be muted to ensure clear audio sound for the duration of the communication. When the communication is complete, audio volumes will be restored to the classroom sources in use prior to the intercom call.

CB-85
